Total Grout Care

Sweep or vacuum to remove dust and loosen soil. Pour or use a sprayer to apply product to grout lines.

Allow to remain a few minutes depending on soil type and concentration. Agitate with a brush.

Vacuum any wash solution with extraction tool. Allow surface and grout to dry before allowing traffic on floors.

Pre-test: Do not use on marble, limestone and other sensitive surfaces - always pre-test first. Pre-test in an inconspicuous location.
